# Portable Telephone Amplifier

If telephone callers' voices seem very quiet or muffled you will benefit from using our small, lightweight telephone amplifier. This user friendly, discreet, portable unit offers versatility in the home, office or on the move. It can boost incoming speech by at **LEAST TWELVE TIMES** and is small enough to be attached to most telephone handsets. The telephone amplifier attaches to the telephone handset with an adjustable rubber strap.

The unit is fitted with a combined on/off volume control and is powered by just one AAA battery. It comes with a carrying pouch and a replacement strap.

As well as amplifying the incoming sound the amplifier also produces a loop signal making it suitable for people wearing a hearing aid fitted with the "T" facility.
